

## Blast-Pro™: The Innovation for Heat Exchanger Tube Cleaning

The development of the Blast-Pro™ fitting was made to revolutionize the tube cleaning industry

The unique fitting was specifically designed to be shorter and smaller in diameter compared to industry-standard fittings allowing it to accommodate tube bends and making it the solution of choice for tube cleaning. The decisive advantage lies in the crimping of the end-fitting reducing the overall diameter of the assembly. As a result, hose types with a greater ID and a larger volumetric flow can be used for a given tube ID.

Blast-Pro™ at a glance:

- Excellent handling
- Easy cleaning of tube bends
- Higher cleaning efficiency while reducing operating time by using hose types with greater IDs
- Suitable for working pressure from 1,380 bar to 1,800 bar (20,000 psi to 26,100 psi)

Blast-Pro™ fittings are already successfully being used in the US market and are available for the following hose types: 5/4, 6/4, 8/4 and 10/4.

Comparison between a standard high-pressure fitting and the new Blast-Pro™ fitting.
